

# CRYME Project

CRYPTOGRAPHIC MIGRATION ENGINEERING

Quantum computers will break today's cryptography.  
How do you migrate complex production systems to  
post-quantum crypto without breaking them?

digital twins · PQC migration · graph-based orchestration

Master project · team-based

## Simulate

Digital twins of production systems: vehicles, embedded systems, client-server stacks, web & app servers, databases

## Migrate

Iterative-incremental PQC migration: protocols, algorithms, keys, certificates

## Validate

Graph-DB orchestrated strategies, Infrastructure as Code, simulation & verification
